The Handy Bt Trait Table provides a helpful list of trait packages to make it easier to understand seed guides, sales materials, and bag tags.

The big change for 2023: The table increased from one to two pages. Companies continue to recombine existing insect modes of action, rename trait stacks (as Syngenta did for 2023), and add Enlist technology (providing tolerance to 2,4-D and fops herbicides) to existing hybrid packages. Each new combination and new name increased the length of the table. The font size and spacing on the one-page version decreased to a point where it was too small. To remedy this, I flow the 2023 table over two pages. Where possible, the font size increased, and a new column was added for bag tag letter codes. For those who need it, the table of 'transformation events', on page 1 of previous tables, has moved online.

I am often asked why older trait packages, with limited or no commercial availability, remain on the table. This is for historical reference, so you can look back and interpret previous year's planting records, seed guides, and research results. Also, companies often refer to older trait stack names in current seed guides (e.g. 'AwesomeSeed's new XYZ Pro is a combination of trait packages A, B, and C'). Thus, the Handy Bt Trait Table is a one-stop shop for both past and present Bt hybrid information.
