

Event checklist: This table shows which events (genetic transformations) were stacked to create specific trait packages in the Handy Bt Trait Table. Events are grouped as targeting caterpillars (blue), corn rootworm (gold), both pests (green), or weeds (gray). The protein(s) expressed by each are listed in the box directly below it. Note that herbicide tolerance genes, listed in *italics*, may be part of a Bt event or standalone.

Up-to-date March 2025	Events for insect control (may include herbicide tolerance)											Events for weed control				
	Caterpillar control					Both ← →	Corn rootworm control					Herbicide tolerance
